Cumulative Contents

	Page
Editorial	1
An estimate of the methyl groups in coals and coal derivatives. *R. Bent, W. K. Joy and W. R. Ladner*	5
An analysis of the line-shapes of the hydrogen magnetic resonance spectra of coals in terms of the line-shapes of known structures. *W. R. Ladner and A. E. Stacey*	13
Studies on the chemical structure of coal III—Oxidative degradation of artificial coal. *C. Yokokawa, S. Kajiyama and Y. Takegami*	21
The inorganic constituents in Australian coals IV—Phosphorus and fluorine—Their probable mode of occurrence. *R. A. Durie and H. N. S. Schafer*	31
Prediction of coke strength from the rank and petrographic composition of Australian coals. *H. R. Brown, G. H. Taylor and A. C. Cook*	43
The extraction by nitric acid of pyrites from vitrains and coal samples. *A. H. Edwards, J. M. Jones and W. Newcombe*	55
Neutral components of higher molecular weight in low-temperature coal tars. *J. D. Brooks and J. R. Steven*	87
The application of the oxygen-flask technique to the determination of phosphorus in coke. *B. P. Kirk and H. C. Wilkinson*	105
Variations in the properties of vitrinite in isometamorphic coal. *H. R. Brown, A. C. Cook and G. H. Taylor*	111
Fractionation of low-temperature tar by liquid thermal diffusion. *J. D. Brooks and J. W. Smith*	125
Reactivity of coal extracts with respect to oxygen. *D. W. van Krevelen and C. A. P. Bakker*	137
Reduction of coal by lithium–ethylenediamine at room temperature. *H. W. Sternberg, C. L. Delle Donne, L. Reggel and I. Wender*	143
Heating of coal with light pulses. *E. Rau and L. Seglin*	147
Measurements of the surface area of coals and cokes by adsorption of xenon, krypton, argon and methanol. *K. A. Kini*	173
Studies on reduced coals I—Mechanism of coal pyrolysis. *A. C. Bhattacharyya, B. K. Mazumdar and A. Lahiri*	181
Mechanisms of coal pyrolysis VI—Reaction patterns in the range 650° to 850 C. *Lynne F. Neufeld and N. Berkowitz*	189
Physical changes during coking. *T. G. Callcott*	203
The role of the cellulosic and lignitic components of wood in artificial coalification. *A. Davis and W. Spackman*	215
The chlorination of coal and related materials. *F. E. Kung*	225
Catalytic dehydrogenation of coal II—Reversibility of the dehydrogenation and reduction of coal. *L. Reggel, I. Wender and R. Raymond*	229
The late Dr Henry H. Storch: Memorial Award	244

PAGE

The initial stages of the oxidation of coal with molecular oxygen I—Effect of time, temperature and coal rank on rate of oxygen consumption. *D. L. Carpenter and D. G. Giddings* 247

Investigation of the temperature variation of the thermal conductivity and thermal diffusivity of coal. *S. Badzioch, D. R. Gregory and M. A. Field* 267

Studies on reduced coals II—Origin of coal tar. *S. Ganguly and B. K. Mazumdar* 281

The reaction of diazonium salts with humic acids and coals: evidence for activated methylene bridges in coals and humic acids. *S. E. Moschopedis, J. C. Wood, J. F. Fryer and R. M. Elofson* 289

An improved technique for the Soxhlet extraction of coal. *R. Raymond, I. Wender and L. Reggel* 299

The accuracy of the B.S. methods for the analysis of coal ash. *D. Flint* 321

The analysis of a bank of standard ashes. *K. Dixon, A. H. Edwards, D. Flint and R. G. James* 331

Direct determination of organic oxygen in coal. *M. S. Burns, R. Macara and D. J. Swaine* 349

The effect of nuclear irradiation at ambient temperatures on the viscosity and chemical structure of a coal tar pitch. *A. Roeger III, J. A. Hammond and P. L. Walker Jr* 357

The carbonization of polymers V—Effects of conditions of carbonization on the decomposition. *J. J. Kipling and B. McEnaney* 367

The initial stages of the oxidation of coal with molecular oxygen II—Order of reaction. *D. L. Carpenter and D. G. Giddings* 375

The diffusion of nitrogen and carbon dioxide from coals of various rank. *S. P. Nandi and P. L. Walker Jr* 385

The determination of microgramme quantities of sulphur in low boiling petroleum distillates and similar products. *E. E. H. Pitt and W. E. Rupprecht* 417

Interpretation of the f_a versus H/C diagram of naturally occurring organic materials. *M. F. Millson and D. S. Montgomery* 427

The surface of coal tar pitch. *D. K. H. Briggs* 439

Electron irradiation of coal. *D. J. Brown and G. J. Pitt* 445

The reduction of asphaltenes. *H. Sawatzky and D. S. Montgomery* 453

Obituary: Dr Rudolf Lessing 479

Joy* 75

Decomposition of coal in arc-image furnace. *E. Rau and R. T. Eddinger* 246

Determination of pyritic sulphur in Australian coals. *H. R. Brown, M. S. Durie and D. J. Swaine;* Chemical identification of methylene bridges in bituminous coal. *L. A. Herédy, A. E. Kostyo and M. B. Neuworth* 409

Indexes 481

Classified Contents

Accuracy of B.S. methods for analysis of coal ash, 321
Analysis of a bank of standard ashes, 331
Analysis of line-shapes of hydrogen magnetic resonance spectra of coals in terms of line-shapes of known structures, 13
Application of oxygen-flask technique to determination of phosphorus in coke, 105
Artificial coalification, role of cellulosic and lignitic components of wood in, 215
Australian coals, inorganic constituents in, 31
— : International Coal Classification, 82
— phosphorus and fluorine in, their probable mode of occurrence, 31
— prediction of coke strength from rank and petrographic composition of, 43
— pyritic sulphur in, determination of, 409

Carbonization of polymers V—Effect of conditions of carbonization on decomposition, 367
Catalytic dehydrogeneration of coal II—Reversibility of dehydrogenation and reduction of coal, 229
Chemical identification of methylene bridges in bituminous coal, 414
Chlorination of coal and related materials, 225
Chloroform extracts, role of, in caking process of coal, 84
Coal, artificial, oxidative degradation of, 21
— bituminous, chemical identification of methylene bridges in, 414
— decomposition of, in arc-image furnace, 246
— heating of, with light pulses, 147
— hydrogen distribution in, 78
— organic oxygen in, direct determination of, 349
— oxidation of, effect of time, temperature and coal rank on rate of oxygen consumption in, 247
— Soxhlet extraction of, improved technique for, 299
— reversibility of dehydrogenation and reduction of, 229
— thermal conductivity and thermal diffusivity of, temperature variation of, 267
— variations in properties of vitrinite in isometamorphic coal, 111
Coal and related materials, chlorination of, 225
Coal ash, analysis of, accuracy of B.S. methods for, 321
— analysis of a bank of standard ashes, 331
Coal pyrolysis, mechanism of, 181
— mechanisms of, VI—Reaction patterns in the range 650° to 850° C, 189
Coal tars, fractionation of low-temperature, by liquid thermal diffusion, 125
— neutral components of higher molecular weight in low-temperature, 87
— origin of, 281
Coal tar pitch, effect of nuclear irradiation at ambient temperatures on viscosity and chemical structure of, 357
— surface of, 439
Coals, hydrogen magnetic resonance spectra of, analysis of line-shapes of, in terms of line-shapes of known structures, 13
— phosphorus and fluorine in Australian —their probable mode of occurrence, 31
— prediction of coke strength from rank and petrographic composition of Australian, 43
Coals and coal derivatives, estimate of methyl groups in, 5
Coals and cokes, measurements of surface area of, by adsorption of xenon, krypton, argon and methanol, 173
Coals and humic acids, evidence for activated methylene bridges in, 289
Coals of various rank, diffusion of nitrogen and carbon dioxide from, 385
Coke strength, prediction of, from rank and petrographic composition of Australian, 43

Decomposition of coal in arc-image furnace, 246
Determination of microgramme quantities of sulphur in low boiling petroleum distillates and similar products, 417
Determination of pyritic sulphur in Australian coals, 409
Diffusion of nitrogen and carbon dioxide from coals of various rank, 385
Direct determination of organic oxygen in coal, 349

Editorial, 1
Effect of conditions of carbonization on decomposition of polymers, 367
Effect of nuclear irradiation at ambient temperatures on the viscosity and chemical structure of a coal tar pitch, 357
Effect of time, temperature and coal rank on rate of oxygen consumption in oxidation of coal, 247

Electron irradiation of coal, 445
Estimate of methyl groups in coals and coal derivatives, 5
Extraction by nitric acid of pyrites from vitrains and coal samples, 55

Fluorine, phosphorus and [in Australian coals]—their probable mode of occurrence, 31
Fractionation of low-temperature tar by liquid thermal diffusion, 125

Heating of coal with light pulses, 147
Hydrogen distribution in coal, 78

Improved technique for Soxhlet extraction of coal, 299
Initial stages of oxidation of coal with molecular oxygen I—Effect of time, temperature and coal rank on rate of oxygen consumption, 247
— II—Order of reaction, 375
Inorganic constituents in Australian coals IV—Phosphorus and fluorine—their probable mode of occurrence, 31
International Coal Classification: Australian coals, 82
Interpretation of f_a versus H/C diagram of naturally occurring organic materials, 427
Investigation of temperature variation of thermal conductivity and thermal diffusivity of coal, 267

Lessing, Dr Rudolf, 479
Light pulses, heating of coal with, 147
Liquid Fuels, review of, 245
Lithium–ethylenediamine, reduction of coal by. A re-evaluation of previous data, 75

Measurements of the surface area of coals and cokes by adsorption of xenon, krypton, argon and methanol, 173
Mechanism of coal pyrolysis, 181
Mechanisms of coal pyrolysis VI—Reaction patterns in the range 650° to 850°C, 189
Memorial Award: the late Dr H. H. Storch, 244

Neutral components of higher molecular weight in low-temperature coal-tars, 87

Obituary: Dr Rudolf Lessing, 479
Overseas Correspondents' Notes, 170, 313, 407
Oxidative degradation of artificial coal, 21

Phosphorus and fluorine [in Australian coals]—their probable mode of occurrence, 31
Phosphorus in coke, application of oxygen-flask technique to determination of, 105
Physical changes during coking, 203
Prediction of coke strength from rank and petrographic composition of Australian coals, 43
Properties of vitrinite, variations in, in isometamorphic coal, 111
Pyrites, extraction by nitric acid of, from vitrains and coal samples, 55
Pyritic sulphur in Australian coals, determination of, 409

Reaction of diazonium salts with humic acids and coals: evidence for activated methylene bridges in coals and humic acids, 289
Reaction patterns [in coal pyrolysis] in range 650° to 850°C, 189
Reactivity of coal extracts with respect to oxygen, 137
Recent developments and notes, 63, 159, 234, 302, 395, 467
Reduction of asphaltenes, 453
Reduction of coal by lithium–ethylenediamine at room temperature, 143
Reduction of coal by lithium–ethylenediamine. A re-evaluation of previous data, 75
Reversibility of dehydrogenation and reduction of coal, 229
Role of cellulosic and lignitic components of wood in artificial coalification, 215
Role of chloroform extracts in caking process of coal, 84

Storch Memorial Award, 244
Studies of chemical structure of coal III—Oxidative degradation of artificial coal, 21
Studies on reduced coals I—Mechanism of coal pyrolysis, 181
— II—Origin of coal tar, 281
Surface of coal tar pitch, 439

Variations in properties of vitrinite in isometamorphic coal, 111
